

Réalisations possibles pour les solutions à base d'Ethernet temps-réel

IEC 61850 Communications aspects based on Switched Ethernet => for Smart Grids

- Satisfying real time performance by the standard in developing extension cards that can transmit critical real-time signals at serial network level
- Development of a new application layer allowing to track the dialogue according to the IEC 61850 standard
- New equipment design playing the role of Ethernet switch/ IEC 61850 converter and data concentrator
